EDUCATION

The University of Texas at Austin, Austin, TX

Expected Graduation: May 2028

Bachelor of Science, Computer Science | Current GPA: 3.96

Relevant Coursework: Speech/Audio Processing, Operating Systems, Computer Architecture, Data Structures

SKILLS

Technical Skills: Python, Java, C, SQL, JavaScript, PyTorch, Scikit-learn, Hugging Face, AI/ML, LLMs, Computer Vision, Data Analysis, Data Schema Design, Data Pipelining, Web Development, Chinese, Japanese

EXPERIENCE

MetOX International, Houston, TX

June 2026 - August 2026

AI/ML and Data Analyst Intern

- Trained Yolo + PatchCore CV models to detect live manufacturing defects, integrating into web app pipelines.
- Produced schemas and ETL pipelines to transfer high-volume data between PLC signals and MySQL databases.
- Develop custom ML models on legacy data to predict and maximize assembly line key performance indicators.

McComb's AI/ML Business Application PG Program, Online

December 2025 - September 2026

Program Participant

- Studied deep learning, NLP, Computer Vision, and Gen. AI foundations through live technical mentoring.
- Developed AI agents using frameworks such as PyTorch, NLTK, SKLearn, etc. to solve real-world business cases.
- Implemented complete ML pipelines, including preprocessing, model training, and evaluation.

MAG Neurospine Clinic, Houston, TX

July 2025 - August 2025

MS Power Apps Web Developer

- Developed a web app database managing 10k+ patient data entries into Dataverse for seamless access.
- Automated migration of legacy PDF and Excel data to Power Apps using SQL and Power Query.
- Prepared technical reports to streamline communication with stakeholders on planning and execution.

NASA High School Aerospace Scholars Program, Houston, TX

September 2023 - June 2024

Project Manager

- Partnered with NASA engineers and led a 10-person research group to simulate a lunar landing mission.
- Integrated CAD modeling and programming simulations for lunar base prototype designs.

PROJECTS

Japanese Word Bomb - Online Web-based Multiplayer Game

November 2025 - January 2026

- Built a real-time multiplayer game using Python WebSockets with JavaScript, HTML, and CSS.
- Designed custom network protocols, private lobby system, and player device sync for smooth gameplay

ORGANIZATIONS

DiRP, Austin, TX

January 2026 - Current

LLM-Training Mentee

- Develop and train a NanoChatBot LLM using transformer, attention, and tokenization mechanisms with PyTorch.
- Study and reproduce LLM techniques from modern models (GPT, Google LLMs, DeepSeek, etc.)

ECLAIR, Austin, TX

October 2025 - December 2025

Trace Development Member

- Contributed to *Trace*, an automated rotating platform that traces a ping-pong ball's motion to follow a digital drawing's outline with motion tracking and live computer algorithm calculations.
- Built a custom Python drawing interface and mapped drawings and velocities through Bezier curve modeling.

Elkins HS Math and Science Club, Missouri City, TX

September 2023 - May 2025

Vice President

- Co-led and won with 4 math/calculator state-level UIL/TMSCA championship teams.
- Planned and taught bi-weekly training sessions and built custom TI-Nspire calculator functions.

AWARDS

- May 2025 - UIL State 1st Place Team (Mathematics and Calculator Events), 6th Place Individual (Mathematics)
- February 2024, February 2023 - University of Houston Math Contest (2nd Place Pre-Calculus, 3rd Place Algebra II)
